

We believe that it is our duty to help protect the environment for future generations. Since our inception, we have sought to ensure that our products are manufactured from recycled materials and are 100% recyclable.

This scheme allows for the responsible disposal of Proguard Correx[®] plastic sheeting. Returned waste is sorted, washed and re-granulated. It is then fully recycled and reused in the production of new plastic products including Proguard Correx[®] sheeting. The end result is a much more sustainable source of supply.

Protect Your Site & Protect Our Environment!

HOW IT WORKS:

Order – Place your order for your protection requirements

Deliver – We will dispatch your order for next working day delivery nationwide

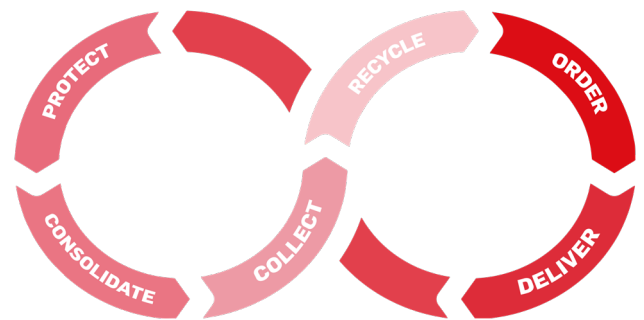

Protect – Install protection materials on site

Consolidate – At the end of the project, consolidate all waste Proguard Correx[®] protection sheeting and stack into your Collect Back Bag. Remember to remove adhesive tape and other debris. Once the bag is full, ensure it is securely tied for transport.

Collect – Call us on 01432 263598 or email sales@beckuk.com to arrange collection of the waste material.

Recycle - Returned waste is sorted, washed and re granulated. It is then fully recycled and reused in the production of new plastic products including Proguard Correx[®] sheeting.

You will be provided with a certificate which will provide a summary of the weight collected, the carbon saving and the volume diverted from landfill.

FAQs

What does the Correx[®] and the Bufferboard[®] get recycled into?

The used material is collected back from site and sent to our recycling facility to be shredded, washed and re-granulated. End products will be suitable for use in plastic manufacturing, contributing to the circular economy. This includes products such as Proguard Correx[®], plastic bowls, plastic car bumpers and more...

How can you prove that the material has been recycled?

Once the material has been received back at our recycling plant you will receive a waste recycling note which will provide a summary of the weight collected, the carbon saving and the volume diverted from landfill.

Is it cheaper to recycle than to use a skip?

Yes! On average it costs £253 to dispose of 1000 sheets of Correx[®] in an 8 yard (25p per sheet). Our collection costs average only 20p per sheet, saving you 20% in disposable costs!

How long does it take for collection of the waste to be arranged?

We require 48 working hours' notice for collection.

What other requirements should we meet?

- Waste sheets must be in the collect back bag
- Minimum collection of 1 bag
- Waste must be strapped/wrapped securely
- Bag must only contain sheets supplied by Beck.

Please note: We reserve the right to reject waste if it is not recyclable. This will incur a disposal charge and 10% admin fee.
