

PROGUARD FROST BLANKET FOAM ROLL

Product Code	Pricing Unit	Colour	Dimensions	Thickness	Pack Quantity	Pallet Quantity
PFRJ2	Each	WHITE	1250mm x 75m	7.5mm	1	2

Product Description:

Proguard Frost Blanket Foam Rolls are ideal for protecting freshly laid concrete from freezing in cold weather, preventing freezing in uncured concrete which can cause cracks or spalling to occur. It works by creating a barrier between the outside air and the fresh concrete surface and also by trapping the small amount of heat generated naturally as concrete cures, preventing frost from forming.

Benefits:

- 100% recyclable.
- Helps prevent uncured concrete from freezing.
- Lightweight.
- Easily portable.
- reusable.
- Easy to cut to shape.

Limitations:

- Due to its lightweight nature, frost blankets must be weighted down with bricks or similar.

Application:

Roll out the foam roll and lay it over the area you need to protect, where necessary the rolls can be overlapped to cover a larger area. We recommend a 300mm overlap for maximum protection. Cut the roll with a utility knife to fit the individual application. Weight the blankets down with bricks or lengths of timber to prevent them being moved by the wind.

Performance Data:

Dimensions	1250mm x 75m
Thickness	7.5mm
Basic Component	LDPE
Density	23 kg/m ³
Weight (Kg)	16
